Abstract. *This paper examines enterprise financial stability under global economic uncertainty. Drawing on a comparative analysis of international standards and methodological sources, it proposes a conceptual mechanism integrating risk assessment, cash flow planning, liquidity reserve management, and cross-functional coordination. The mechanism's stages, responsibilities, and performance indicators are outlined. Its interdisciplinary approach combines financial analysis, operational planning, and organizational management. The proposed mechanism requires empirical validation using enterprise-level data.*

Keywords: *economic uncertainty, financial stability, financial risk, integrated mechanism, cash flow, liquidity reserve.*

Annotatsiya. *Tezisda global iqtisodiy noaniqlik sharoitida korxonalarning moliyaviy barqarorligini ta'minlash masalalari o'rganilgan. Xalqaro standartlar va uslubiy manbalarni qiyosiy tahlil qilish asosida risklarni baholash, pul oqimlarini rejalashtirish, likvidlik zaxirasini boshqarish va bo'linmalararo hamkorlikni birlashtiruvchi konseptual mexanizm taklif etilgan. Uning bosqichlari, mas'ul ijrochilari va natijadorlik ko'rsatkichlari tizimlashtirilgan. Fanlararo yondashuv moliyaviy tahlil, operatsion rejalashtirish va tashkiliy boshqaruvni uyg'unlashtirish orqali ifodalangan. Taklif etilgan mexanizmni korxonalarning haqiqiy ma'lumotlari asosida empirik tekshirish zarurligi qayd etilgan.*

Kalit so'zlar: *iqtisodiy noaniqlik, moliyaviy barqarorlik, moliyaviy risk, integratsiyalashgan mexanizm, pul oqimi, likvidlik zaxirasi.*

Аннотация. *В тезисах рассматривается обеспечение финансовой устойчивости предприятий в условиях глобальной экономической неопределённости. На основе сравнительного анализа международных стандартов и методических источников предложен концептуальный механизм, объединяющий оценку рисков, планирование денежных потоков, управление резервом ликвидности и межфункциональное взаимодействие. Систематизированы его этапы, ответственные исполнители и показатели*

результативности. Междисциплинарный подход выражен в согласовании финансового анализа, операционного планирования и организационного управления. Отмечена необходимость эмпирической проверки механизма на фактических данных предприятий.

Ключевые слова: *экономическая неопределённость, финансовая устойчивость, финансовый риск, интегрированный механизм, денежный поток, резерв ликвидности.*

Introduction

Global economic uncertainty underscores the need to align enterprise financial decisions with changing external conditions. The International Monetary Fund's April 2025 report highlights the importance of rebuilding buffers and adapting to risks amid policy shifts and heightened uncertainty. This macroeconomic context provides a basis for examining adaptive approaches to financial management at the enterprise level.

In this study, financial stability is understood as an enterprise's capacity to meet its obligations, finance its core operations, and preserve opportunities for development. The central research problem concerns the integration of risk assessment, cash flow planning, and operational decisions into a coherent management process.

The study aims to develop an integrated mechanism for ensuring enterprise financial stability under global economic uncertainty. Its objectives are to identify the mechanism's management components, establish their interrelationships, and propose performance assessment criteria.

Research Methods

The study employs comparative analysis of international standards and methodological publications, synthesis, a systems approach, and conceptual modelling. Sources were selected to address risk management, cash flows, early-warning indicators, and corporate governance.

The analysis comprised three stages: examining methodological requirements; linking factors affecting financial stability to management tasks; and developing an integrated mechanism and assessment criteria. As no primary enterprise data were used, the findings are presented as conceptual proposals.

Research Results

Methodological Foundations

ISO 31000:2018 treats risk identification, analysis, evaluation, treatment, and monitoring as interrelated processes. COSO guidance emphasizes linking early-warning indicators to underlying risk drivers and management actions.

Cash flow assessment can draw on the classification of operating, investing, and financing activities established by IAS 7. Accordingly, the proposed mechanism separately plans funds generated by core operations, investment payments, and debt-related cash flows.

From a corporate governance perspective, the G20/OECD Principles address sustainability and resilience as a distinct area. The mechanism therefore encompasses not only financial indicators but also decision-making responsibilities and cross-functional coordination.

Structure of the Integrated Mechanism

The proposed mechanism follows this sequence:

External change → assessment of financial impact → cash flow planning → response measures → reassessment of results.

An external factor is thus linked to a management decision through its assessed effect on the enterprise's receipts, expenditures, or obligations.

Table 1

Integrated Mechanism for Ensuring Enterprise Financial Stability

Stage	Main task	Responsible units	Management output
Risk identification	Monitor demand, costs, exchange rates, and financing conditions	Finance, sales, and procurement departments	Prioritized risk register
Financial impact assessment	Assess effects on receipts, payments, and debt servicing	Finance department and relevant specialists	Estimated funding shortfall
Resource coordination	Align payments, purchases, and investment schedules	Finance, production, and procurement departments	Updated cash flow plan
Selection of responses	Assess options for accelerating receipts, revising expenditure, and obtaining financing	Enterprise management	Approved action plan
Monitoring and adjustment	Compare planned and actual results	Finance department and designated staff	Revised decisions

For example, when the cost of imported raw materials is expected to increase, the procurement department provides information on purchasing terms. The production department assesses inventories and production schedules, while the sales department evaluates possible adjustments to prices or sales terms. The finance department consolidates the cash flow implications of these alternatives. The final decision considers not only purchase prices but also operational continuity and financing capacity.

Liquidity Reserves and Decision-Making Procedures

The mechanism proposes setting a minimum liquidity reserve based on mandatory payments, the stability of cash receipts, and access to financing. It does not prescribe a uniform reserve requirement for all enterprises.

Where cash flow projections indicate that the reserve may be insufficient, the following options are assessed sequentially:

- collecting receivables and accelerating cash receipts;
- negotiating payment schedules with counterparties;
- rescheduling expenditure and investments that can be deferred;
- evaluating the costs and terms of additional financing.

Each measure is assigned a responsible person, an implementation deadline, and an expected financial outcome. Expenditure reductions are assessed alongside constraints relating to occupational safety, product quality, and mandatory payments.

Discussion

The principal feature of the proposed mechanism is not the enumeration of individual financial instruments but their integration into a unified decision-making process. Risk information informs the cash flow plan, which subsequently determines departmental tasks and management decisions.

The interdisciplinary dimension combines financial analysis, operational planning, and organizational management. In this way, global uncertainty is connected to practical enterprise-level tasks: coordinating payments, determining liquidity reserves, and selecting response measures.

The mechanism may be evaluated using the following indicators:

- cash flow forecast error;
- the proportion of mandatory payments made after their due dates;
- the number of periods involving liquidity shortfalls;
- the implementation rate of approved response measures;
- the cost of funds raised through emergency financing.

Comparisons with the pre-implementation period should account for differences in sales volumes, seasonality, and external conditions. The principal limitations concern data quality, forecasting assumptions, and cross-functional coordination. Initial implementation within a limited operational area is therefore recommended.

Conclusion

The study proposes a conceptual mechanism integrating risk assessment, cash flow planning, liquidity reserve management, and cross-functional coordination. Its practical focus is to connect external changes with specific financial impacts and corresponding management responses.

ACADEMIC SCIENCE PUBLISHING

Implementation requires clear information-sharing procedures, defined responsibilities, and regular reassessment of results. The effectiveness of the proposed approach should be empirically tested using actual enterprise data.
